

Covalent bonds

Step 1: Write down the chemical formula

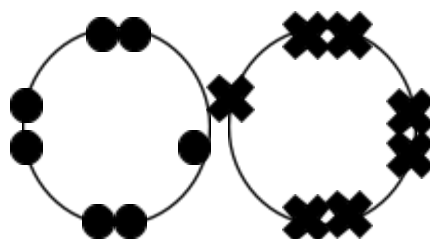

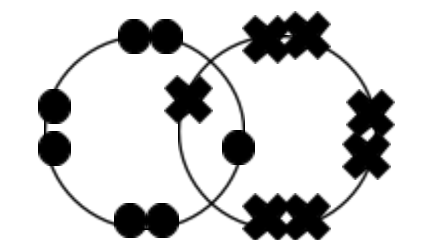

Step 2: Write down what atoms you need and how many of them

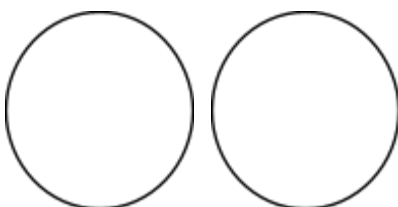

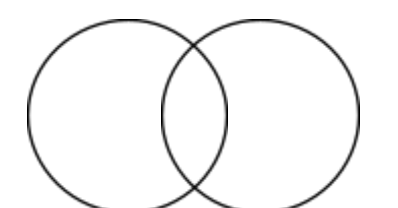

Step 3: Draw those atoms (just outer shell)

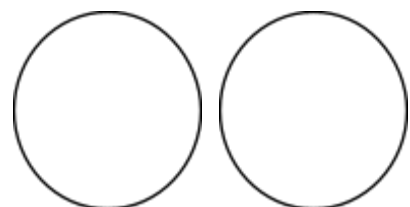

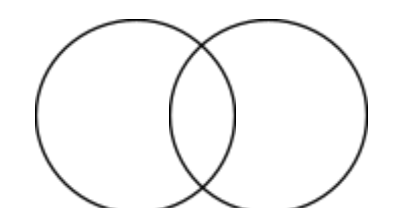

Step 4: Work out the number of electrons which need to be shared (same as the number of electrons which are missing)

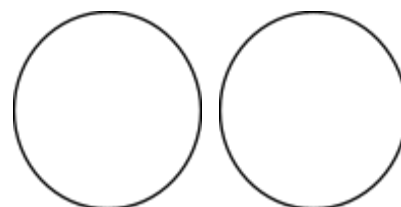

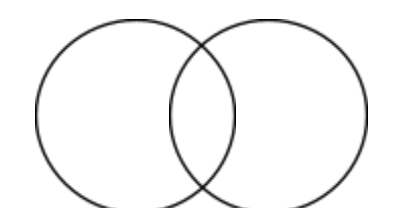

Step 5: Share the electrons

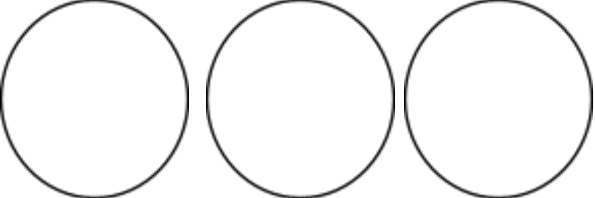

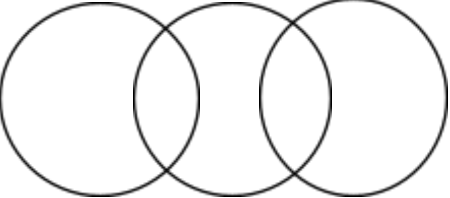

Step 6: Count to make sure you got it right

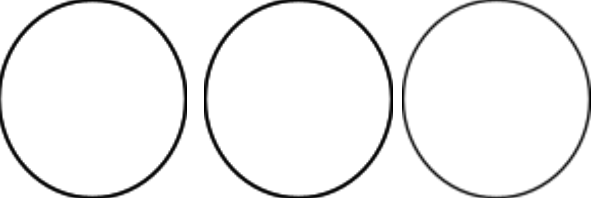

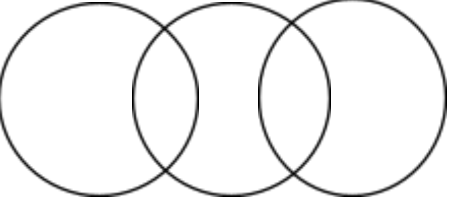

Chlorine	
1	Cl ₂
2	2 chlorines
3	 Chlorine Chlorine
4	Both chlorines need 1
5	
6	Yes

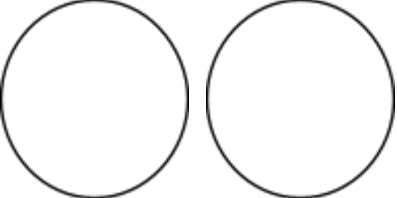

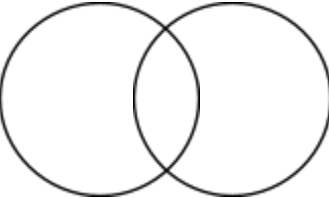

Oxygen	
1	O ₂
2	
3	
4	
5	
6	

Hydrogen	
1	
2	
3	
4	
5	
6	

Hydrochloric acid	
1	
2	
3	
4	
5	
6	

Water	
1	
2	
3	
4	
5	
6	

Carbon dioxide	
1	
2	
3	
4	
5	
6	

Hydrochloric acid	
1	
2	
3	
4	
5	
6
